DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 6-14 are rejected under 35 U.S.C. 102(e) as being anticipated by Okumura et al. (U.S. Patent No. 5,892,260).

In re claims 6-14, Okumura (Figs. 4, 21, 22) discloses in a circuit comprising a plurality of SOI devices, a method for enhancing the performance of the circuit, the method comprising:

Providing a pulse discharge circuit (312, 2103), the pulse discharge circuit having a pulse generator connected to the circuit;

Using the pulse generator to generate a pulse (column 6, lines 28-36; column 11, lines 50-67 and column 12);

Discharging any accumulated potential on the body of at least one of the plurality of SOI devices to a point having a lower potential than the accumulated potential of the body in response to the pulse from the pulse generator prior to accessing said at least one SOI devices.

Double Patenting

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

4. Claims 6-14 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-4 of Flaker et al. (U.S. Patent No. 6,160,292) in view of Okumura et al. (as above).

In re claims 6-14, Flaker discloses the a semiconductor SOI device, wherein a pulse discharge circuit is connected to the source of the SOI device, but does not expressly disclose the pulse discharge circuit connected to the body region of the device. Okumura discloses an SOI circuit configuration wherein the substrate is biased via the body region, disclosed as the "back gate" region by Okumura. It would have been obvious for one skilled in the art to connect the pulse discharge circuit directly to the body region of Flaker, as disclosed by Okumura for the purpose, for example, of enhancing the speed of the device while decreasing the power dissipation (Okumura; column 4, lines 5-15).

Response to Arguments

5. Applicant's arguments with respect to claims 6-14 have been considered but are moot in view of the new ground(s) of rejection.
